Kiem-Phong Vo

Technology Center 2600

DOCKET NO.: 2001-0173

TITLE: REAL TIME REPLAY SERVICE FOR COMMUNICATIONS NETWORK

SERIAL NO: 010/015,516

GROUP ART UNIT: 2684

FILING DATE: 12/13/01

EXAMINER: TRIN, TAN H

COMMISSIONER FOR PATENTS
ALEXANDRIA, VA 22313-1450DECLARATION UNDER 37 C.F.R 1.131

I, Kiem-Phong Vo, of 80 Swenson Circle, Berkeley Heights NJ 07922,
declare the following:

I am the inventor named in the application identified above;

I made the invention described and claimed in that application prior to April
26, 2001;

As evidence of that declaration, attached to this paper are copies of:

1. An e-mail message dated March 15, 2001, from me to David Belanger, to whom I reported in the AT&T organization structure at the time.

The message describes the subject matter claimed in my patent application. The e-mail message was also addressed to Robert Canavan

(rcanavan@att.com) who was the patent attorney assigned to my technical organization.

2. An e-mail message dated March 16, 2001 addressed to Robert Canavan, patent attorney, conveying as attachment describing the work in my e-mail message of March 15 (above).

3. A patent disclosure letter dated March 16, to David Belanger from Robert Canavan, documenting the establishment of a patent study item, which item corresponds to the work referred to in the e-mails above, and to the subject matter claimed in my patent application. As indicated on that letter I was sent a copy of the letter.

Declarant acknowledges that willful false statements and the like are punishable by fine or imprisonment, or both (18 U.S.C. 1001) and may jeopardize the validity of the application or any patent issuing thereon. All statements made of the declarant's own knowledge are true and that all statements made on information and belief are believed to be true.

Date: 11/05/2004

Declarant

Subject: RE: Real time voice replay

Bob, in that case, we should go ahead and file an application. Phong.

To: David G. Belanger

Patent Disclosure No. 2001-0173 was docketed on March 16, 2001 and has been referred to the User Experience Intellectual Property Review Team to consider the patentability of the above-identified subject matter. Kiem-Phong Vo appears to be the originator.

The subject matter of this disclosure may be summarized as follows:

A conversation is a forum in which participants attempt to transfer information in real time to one another via means such as voice, keyboards, wireless devices etc. Currently, such transferred data are assumed to be immediately consumed by the receiver (s), then disappear. Examples of conversations include telephone calls, conference calls, electronic drawing boards and instant messaging. But data transmission can be briefly interrupted or lost. For example, during a conversation conducted via a telephone network, voice data can be corrupted by jitters on the network circuit or they may be received but not properly processed because the listener got distracted by some external events (e.g., baby crying). In such cases, instant replay can be helpful to resynchronize the conversation. We propose that instant replay can be implemented as a feature of the data transfer medium via some combination of the network, broadband phone, cable modem, or instant messaging module by buffering the last n units (minutes, lines of text, etc.) of a communication for some appropriate n.

Please notify me (908) 221-4535 of any changes in either the technical or commercial aspects of the disclosure. It is also important that I be informed of any relevant work by others, either in or out of the AT&T family, as well as to any AT&T or non-AT&T product which may utilize this subject matter.
